SAGLIA ENKA® by Brunello:
a quality viscose lining
100% Made in Europe, responsible,
competitive, certified, ethical, traceable,
and transparent in every process.

RAW MATERIAL & YARN

We use Enka® Viscose Filament Yarn, produced in Germany by ENKA® unique spinning process with material cycles and recovery units, using cellulose pulp sourced from FSC®-certified Swedish forests, sustainably managed following a strict wood procurement policy. The yarn is biodegradable and fully traceable.

LINING

The yarn is then transformed in Italy into lining by Brunello, a specialist known for its excellence worldwide since 1927 in weaving artificial textile fibres for premium linings and fashion fabrics. Brunello champions the values of tradition, innovation, and eco-sustainability, with a corporate headquarters of over 65,000 square meters and a specialized team. Brunello pays meticulous attention to their choice of materials and business partners, to satisfy their core pillars of quality and sustainability.

FINISHING

This is carried out by Ti.F.A.S., a historic dyeing and finishing company that has been dyeing and finishing fabrics – especially linings in artificial fibres - at its Lurate Caccivio headquarters in the province of Como since 1972.
